

ABSTRACT OF THE DISCLOSURE

A hood-shaped cover for an electronic device includes a device-proximal bottom side and a device-distal side, and a cable guide for routing a connecting cable of the electronic device such that a plug-in connector of the connecting cable is connectable to the electronic device. The cable guide includes in the device-proximal bottom side an opening which is configured to extend helically toward the device-distal side into a passageway for encompassing the connecting cable and terminates in a cable outlet disposed tangentially to the device-distal side of the bottom.
